

Quad-Mesh Sprite Animation

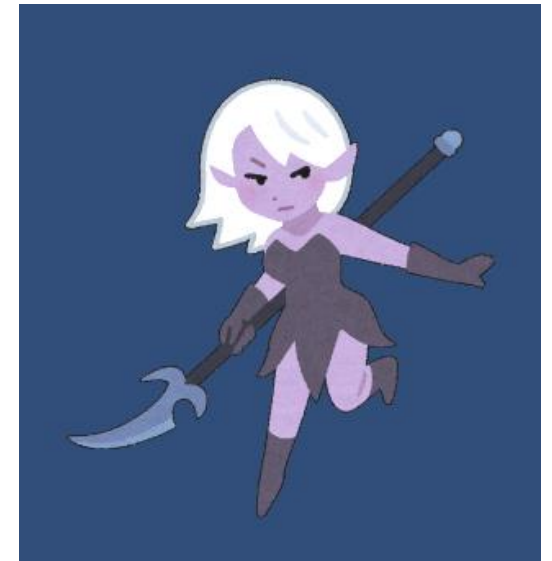

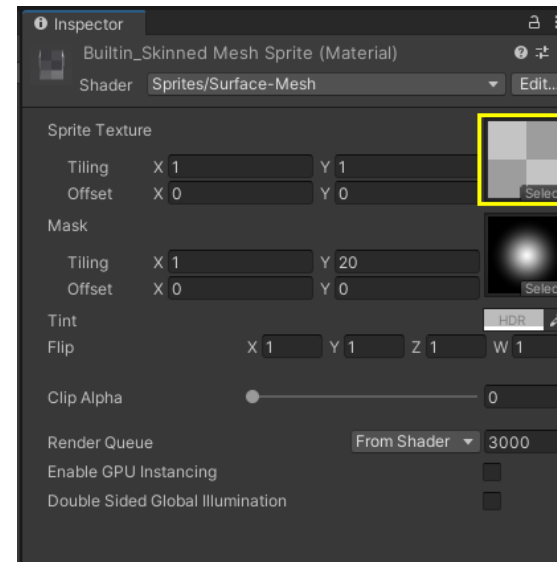

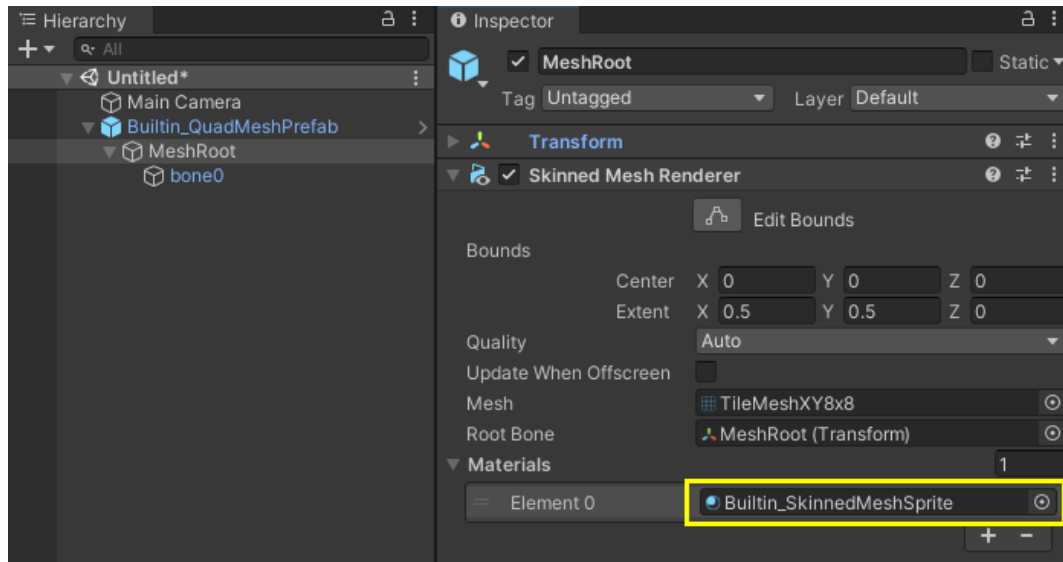

Quick guide

Quick Start

Change a texture

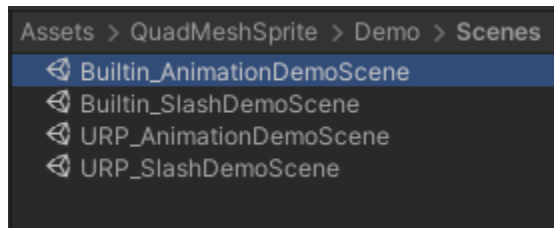

- Select MeshRoot > Skinned Mesh Renderer > Material
- Set your texture in Sprite Texture

Check animations

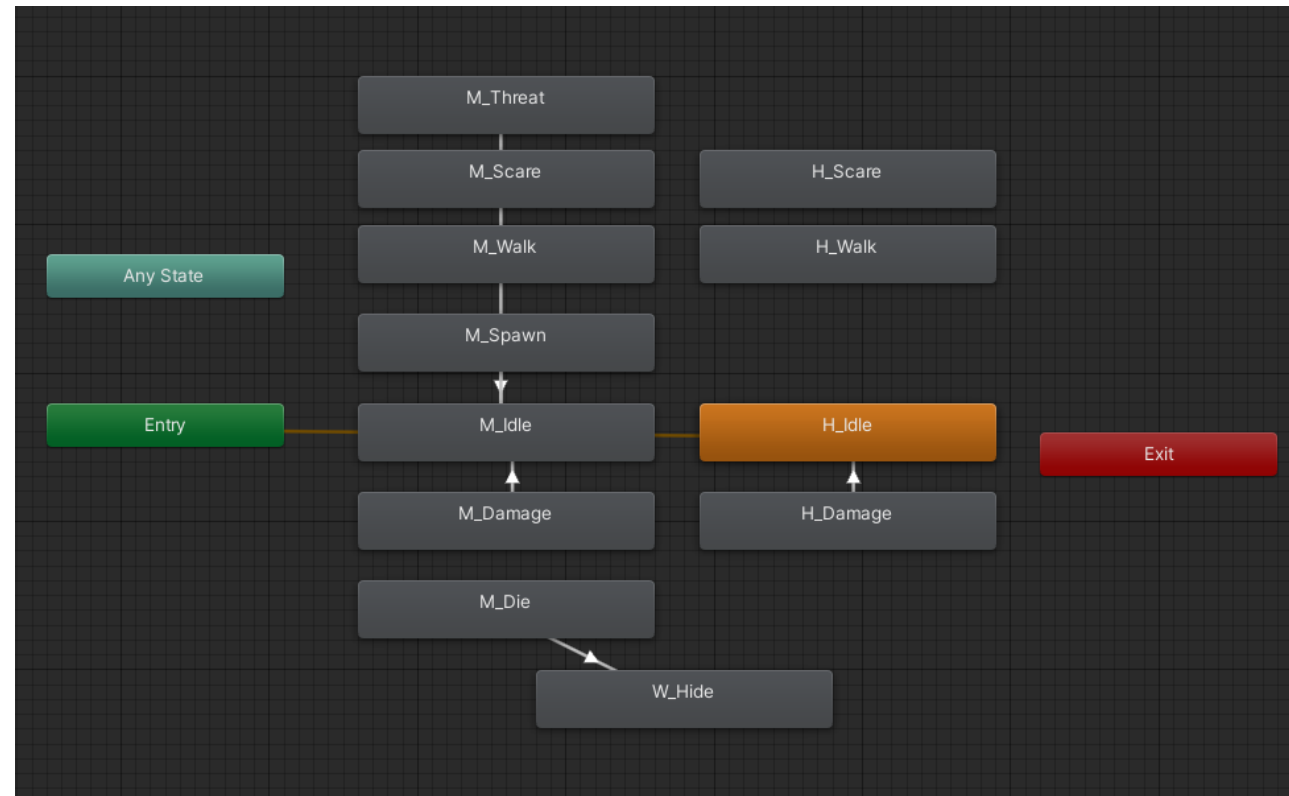

- Select Demo/Scenes/Builtin_AnimationDemoScene.unity (or URP_AnimationDemoScene)
- Play and check animations
- If you want to play animation in your project, Play([animation name]) in your project.

an [animation name] is here.

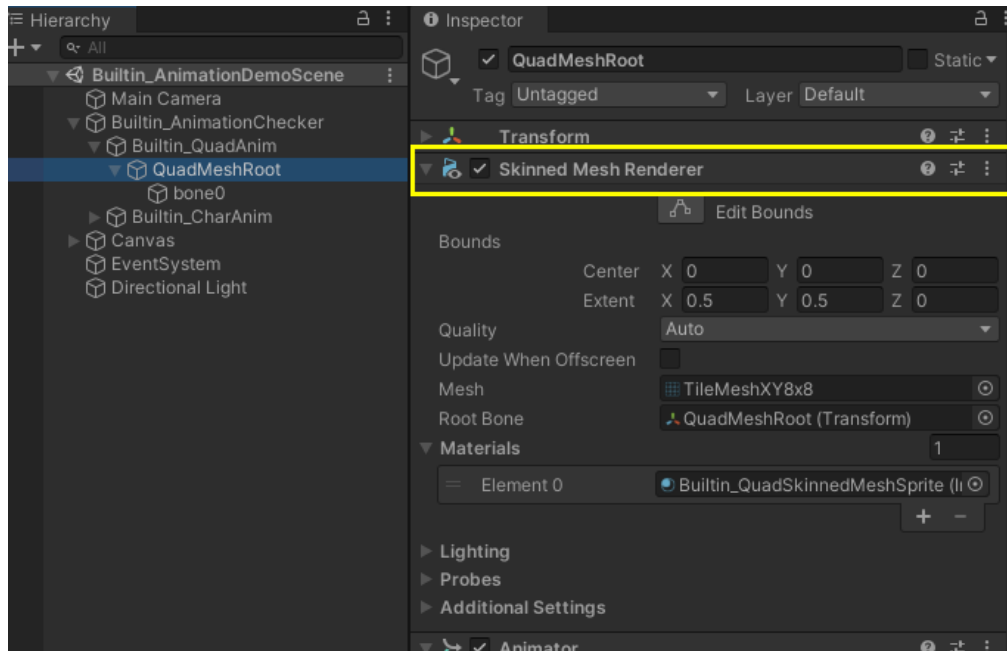

Play Animation in your script

If you want to play animation in your project, `Play([animation name])` in your project

Play Animation in your script

```
[SerializeField] Animator m_charAnimaotor = null;  
:  
m_charAnimaotor.Play( "H_WALK" ); // walk animation
```

DEMO (using Quad-Mesh Sprite)

- Before play demo, you need to install some packages from Package Manager.
Chinemachine/TextMeshPro/2D TileMap/PostProcessing [built-in renderpipeline]
- Select Demo/Scenes/Builtin_SlashDemoScene.unity and play it.
(select URP_SlashDemoScene when URP mode)
- 2D Lighting will works on URP mode.
- Direction or other lighting will work on Built-in mode.
- Set Transparency Sort Mode when Built-in mode.
